

Objectives:

- PPE's and CPE's are essential to ensure the health and safety of workers, but we must remember that prevention should not end after being supplied by the company. It is also necessary to guide the worker on how to use the equipment and how to store them. In addition, the personal equipment must be adjusted to the size of each employee, so that the equipment does not fail.
- Ensuring employee safety is a concern of any administrator. The company must provide and verify the correct use of the Protection Equipment. Two types of apparatus are essential to mitigate business risks and the risks of accidents to workers: Personal Protection Equipment (PPE) and Collective Protection Equipment (EPCs).
